@COMMENTS

RBC - Anisocytosis 1+. Poikilocytes 1+.  
WBC - A few reactive lymphocytes present.  
Platelets are clumped in the film. Platelets appear normal in number.  
No fresh film received.CR

VETERINARY INTERPRETATION:

Reactive lymphocytes can be seen with any cause of immune stimulation.  
The CBC is otherwise unremarkable.  
Amy L. Weeden, DVM, DACVP (clinical pathology)

They consist of numerous lymphocytes, most of which are small, numerous neutrophils, and a mildly pleomorphic population of round cells. Individual round cells have a round to oval to indented nucleus with granular chromatin and indistinct nucleoli. They have a moderate amount of lightly basophilic cytoplasm that often stains lighter than the surrounding proteinaceous background. Scattered binucleated cells and rare mitotic figures are observed. The background is basophilic, proteinaceous, and contains a small amount of blood.<br/> Interpretation: Lip mass - Histiocytoma<br/> Comment:<br/> Thank you for the history and samples. Histiocytomas are generally benign neoplasms that regress spontaneously (usually within 6-8 weeks). As they regress, they become centrally ulcerated and infiltrated with small lymphocytes. Excision is also curative.<br/> Julie Tomlinson, DVM, DACVP<br/> Cytology performed and reported by Gribbles Veterinary, Carbine Rd, Auckland<br/> Reference Ranges and Method Reference will be supplied on request<br/> Testing Requested<br/> 1 x Cytology Smear (up to 10 slides)<br/> 1 x Cytology Smear (up to 10 slides)<br/> @END</p> |
| 26 Jun 2018 | Sarah Foster     | Treatment - consult re-check seized                            | <p>Lab results show histiocytoma<br/> Should resolve on own, so monitor<br/> If not resolved in 6 weeks or getting worse may need to remove</p>  |

He was given a bolus of LRS and dextrose, and continued on LRS with dextrose supplementation. As blood pressure was consistently low, voluven was also started and bolused as required.<br/>We have been syringing puppy approximately 2-3mls every 1-2 hours overnight, which he has for the most part tolerated well.<br/>He has had profuse haemorrhagic diarrhoea overnight. SNAP parvo test was negative.<br/>I have started him on temgesic this morning as he has been increasingly more uncomfortable on abdominal palpation.<br/>Current fluids:<br/>LRS + 5% dextrose @ 3.5ml/hr (100ml/kg/day)<br/>Voluven @ 0.7ml/kg/day (20ml/kg/day). Total of 11mls administered (just under 15ml/kg)<br/>Medications administered:<br/>Temgesic 0.015mg/kg IV. Dose given 9/1 @ 6am. Next dose due Tuesday 12pm.<br/>Please do not hesitate to contact us with any questions or concerns,<br/>Best regards,<br/>Senka Piri BVSc<br/>VSA&amp;E Vet<br/>History<br/>08-01-2018 10:56:06pm, Dr Senka Piri<br/>Seized puppy from SPCA. Runt of litter that we saw about 4 weeks ago with GSD bitch,<br/>As per email: If it is deemed necessary to euthanise pup overnight on humane grounds then that is approved by Greg Reid Chief</p> |

Inspector 0272780911.  
 History of lethargy, inappetance and diarrhoea.  
 Given Baycox, Cerenia, metoclopramide, metronidazole and started on IV fluids @ 2 ml/hr.  
 Physical Exam  
 08-01-2018 11:08:15pm, Dr Senka Piri  
 Depressed mentation  
 Severely dehydrated  
 Temperature: 37.5  
 MM: pale pink, CRT: prolonged, tacky  
 EENT: WNL  
 Respiratory: Lung sounds normal in all fields. Respiratory effort slightly increased. RR: 36bpm.  
 Cardiac: No heart murmur or arrhythmia auscultated. Femoral pulses weak. HR: 160bpm.  
 Abdomen: Mild groaning on palpation, no obvious mass effect palpable  
 Neurological: Decreased mentation, ambulatory but weak and slightly ataxic.  
 Musculoskeletal: Ambulatory all 4 limbs.  
 Dermatological: Poor coat condition.

The puppy was judged to be in a moderate state of preservation and in thin body condition (620gm) with minimal to no perirenal and pericardial fat reserves. There were small amounts of clear watery fluid in the stomach admixed with small flecks of soft brown food material. The small intestine was mostly empty and there was no faecal material in the colon. There were no other significant gross findings.<br/> Morphological diagnosis:<br/> Atrophy of perirenal and pericardial fat reserves, marked<br/> Sampling: Multiple formalin fixed tissues were sampled and fixed. Fresh brain, liver and small intestinal contents were also collected.<br/> Comments: Jess, as discussed over the phone this puppy was in very poor body condition however there were no obvious pathological findings on the post mortem exam to explain this.</p> <p>Hania Klobukowska BVSc, MVS (dist), Diplomate ACVP Anatomic Pathology,<br/> Gribbles Palmerston North<br/> Phone: (06) 3502939 Email: hania.klobukowska@gribbles.co.nz</p> <p>NECROPSY performed and reported by Gribbles Veterinary, Tremaine Ave,<br/> Palmerston North Reference Ranges and Method Reference will be supplied on request Testing Requested<br/> 1 x Necropsy<br/> 1 x Necropsy<br/> 1 x Necropsy<br/> @END</p> <p>IMPORTANT - GRIBBLES is a division of Healthscope Limited.</p> <p>This email contains confidential information intended only for the person named above and may be subject to legal privilege.
