s 14 Criminal Procedure Act 2011

CRN:

18092503955

Filed in the District Court at Manukau

on:

2 November 2018

### Defendant

Name:\* Barbara Glover

PRN:

61092530

Address: 1478 Miranda Road  
Mangatangi  
Mangatawhiri 2473

Gender:\* Female  
Date of birth:\* 2/08/1938  
Driver licence no:  
Occupation: Farmer / Dog Breeder

### Offence details

I, Kevin Plowright of the Royal Society for the Prevention of Cruelty to Animals (Auckland) have good cause to suspect that Barbara Glover has committed the offence specified below.

Date of offence:\* Between 28 July 2017 and 13 October 2017

Offence location:\* at Mangatawhiri

Offence description: \*

Being the owner of an animal, namely a German Shepherd dog named Astro, did not ensure that the physical, health and behavioural needs of that animal were met in a manner that was in accordance with good practice.

Legislative reference:\* Animal Welfare Act 1999, sections 10, 12(a) and 25.

Maximum penalty:\* 12 months' imprisonment and/or \$50,000 fine.

Offence category:\* 2 Representative charge:\* No Alternative charge:\* No

Select Yes if the offence description is worded as a representative or alternative charge.

### First appearance hearing

Date: 17th December 2018

Time: 9am

Court: Manukau District Court

### Prosecutor details

Prosecutor:\* Royal Society for the Prevention of Cruelty to Animals (Auckland)

Address for service:\* Kayes Fletcher Walker (Luke Radich)

# AWS 130 INSTRUCTION TO PREVENT OR MITIGATE SUFFERING

Pursuant to section 130(1)(b) - Animal Welfare Act 1999

D 2317

Issued to: (Name): Barbara Glover + Janine Weller DOB: Janine - 9/2/60

Owner

Person in charge

Person appearing to be in charge. (circle one)

Address: 1476 Miranda Rd, Mangatangi

On: (Date): Friday 13<sup>th</sup> October 2017 Time: 3:00 pm

I inspected animals on the property situated at (address):

1476 Miranda Rd, Mangatangi

My inspection indicated:

53 x general shepherd dogs various ages & 3 1/2 wks old pups living in dirty conditions, exposed to ammonia, inadequate shelter, no water, ear infections, skin conditions & in order to prevent or mitigate animal suffering, you are hereby required to comply with the following underweight instructions, within the time specified for each action: (continue on a supplementary sheet if necessary)

- Front property runs - 2 x adults, 1 female with matted & dirty fur requires grooming - within 48 hrs. ✓
- 1 x female pup in run next, with no shelter - shelter required immediately.
- Any croted dog must not be croted for any longer than 1 hr.
- Every dog must have access to fresh water
  - suitable sleeping area free from urine & faecal matter. On a worksheet flooring is not suitable for housing dogs due to risk of injury.
- Tethered dogs must not be tethered by choke chains & must have a minimum of 2 mtrs length - immediately
- Ensure all dogs have opportunity to display normal patterns of behaviour - immediately

Enquiries may be made to: Lorraine / Kevin of RSPCA NZ Police

Office Telephone No: 09 256 7300 Mobile Telephone No: 027 278 0905

69. We decided not to seize the dogs on that day but come back the following day with an SPCA veterinarian (Jess Beer) and a community constable. We anticipated that Ms Glover and Ms Wallace would not be pleased that the dogs were being seized and we wanted this process to be conducted as calmly as possible.
70. We returned to the property at 11:30am on 13 October 2017. I was accompanied by Inspector Davis, veterinarian Jess Beer, a community constable named Todd (I am unsure of his last name) and Waikato Animal Control Officer Rhys Heatley. We also brought with us a number of SPCA staff to assist with transportation of the dogs.
71. Upon arrival, Ms Glover came out of the house. I advised why we were at the property and advised her of her rights in terms of the Bill of Rights Act. I said that I would not be asking any questions today but anything she may say could be used as evidence in a court. Ms Glover asked me to wait until Ms Wallace was home she was only 15 minutes away.
72. We proceeded to inspect the property and identified dogs to be seized.
73. We seized the following dogs:

(1) MONTY

Young male pup tethered on a short leash to a picket fence. He did not have water.

(2) ASTRO

Adult male dog in the old enclosure. He was identified by the veterinarian as being underweight, with a matted coat and an ear infection that required treatment.

(3) DOLLY

Adult female dog seized from the same enclosure as Astro. The veterinarian identified similar problems with her as with Astro.

(4) MAFIA

Adult male dog seized from the same old enclosure area as Astro and Dolly and also exhibiting the same problems.

(5) CASPER

**Inspector Statement**

Glover. We would also get Waikato Animal control to assist us with the safe removal of welfare comprised dogs.

**INSPECTION 5.**

On the 13<sup>th</sup> of October 2017 at approximately 11:30am Inspector Lori Davis and I entered the property of 1478 Miranda road Mangatangi assisted by, Veterinarian Jess Beer, Community Police Constable Todd..., Waikato Animal Control Officer Rhys Heatley and a number of SPCA staff to assist with the transportation of dogs.

As we drove up the driveway we sighted a pup in the pen area next to the cottage without shelter. We stopped outside the picket fence of the main house. There was another young pup which was tethered without shelter or water. Another adult dog was also tethered without shelter and water. Mrs Glover came out of the house I advised her of why we were at the property and advised her of the Bill of Rights. But I said I would not be asking any questions today but anything she may say could be used as evidence in a court of law. Mrs Glover asked me to wait until Ms Wallace was home as she was only 15min away. We decided to proceed regardless.

I first checked on the dog that was tethered in the utility shed yesterday. This dog was no longer there. The young male pup tethered on a short leash to the picket fence was seized and entered as **"MONTY" dog 1.**

I then looked at the dogs in the old enclosures with the veterinarian, the enclosure had been cleaned out and the dogs had water. The Veterinarian stated the dogs were underweight, matted coats and with ear infections. We seized a male dog **"ASTRO" dog 2.** & a female **"DOLLY" dog 3.** & a male dog **"MAFIA" dog 4.**

Ms Wallace arrived home, I informed her of why we were at the property, I advised her of the Bill of Rights but let her know I will not be asking any questions today. As we would be focusing on the safe removal of welfare compromised dogs from their care.

We walked past the utility shed and heard dogs barking from inside a locked room in the utility shed. We had not been aware of any dogs being kept in this room previously. We requested that Ms Wallace produce a key for the room.

We continued to the cattle yards, one young male pup was tethered on a short leash without any water and inadequate shelter. This dog was seized. **"Casper" dog 5.** Two other adult female dogs were tethered in the cattle yards, one was underweight 2/9 BCS and matted coat. This dog was seized **"Zeta" dog 6.** The other dog we decided to leave.

As we entered into the garage, Ms Wallace asked if we had a warrant for the removal of dogs, I suggested Ms Wallace Google search the Animal Welfare Act 1999 and search section 127 (5) and that will explain the powers that we were operating under. The dogs were confined in the crates without water. We are

Occupation: **TRAINEE AWI**

**Inspector Statement**

just wait for Janine. Barbara Glover was then addressed by Todd Kirker from Tuakau Police to further inform her. She became visibly distressed and refused to speak with him also. We therefore started our seizure process.

We brought SPCA Veterinarian Jess Beer to perform a basic assessment on the dogs living conditions and a basic health assessment.

Dog 1 seized, Monty, a young male pup tied to the picket fence by short 1m lead attached to a choke chain. He was in normal body condition but without any shelter. He had water. Yesterday he was tethered by a short lead around by the concrete kennel runs with no water and no shelter.

The concrete kennel runs had been cleaned and the dogs all had water today. SPCA Veterinarian assessed the dogs inside the runs. They were all underweight, their coats were all matted and covered in faecal matter and urine. A couple of the dogs were shaking their heads and displaying signs of distress. Dogs 2. Astro, male adult, 3. Dolly, female adult and 4. Mafia, male adult were seized.

In the large open utility garage the dog tethered on the short lead seen yesterday was gone, the bowl with unpalatable water remained and the urine & faecal staining was still evident on the floor. There were scratch marks on the floor and wall. There was an empty crate right at the rear of the shed unclean, with stained and ripped newspaper. We could hear adult barking coming from somewhere. We sighted a dead bolted door we had never seen before and certainly had not ever been shown. We could hear adult barking coming from there. There were no windows. We didn't want to cause unnecessary damage to the door and carried on with the inspection with the intention of asking Janine to unlock it for us.

At the cattle yards where an adult 'Ritzi' had been tethered yesterday was now a young pup who started fear urination as we approached. Our veterinarian stated he had bony abnormalities. He was tethered by 1m lead to a cattle crush with no water and no adequate shelter on a concrete floor covered with urine and faeces. Dog 5 Casper young male was seized.

Inside the cattle yard were a further two female adult dogs both tied on chains approximately 1m long. One in normal body condition with water and one underweight with a moderately matted coat. Identified as Dog 6 Zeta seized. Both dogs were tethered with choke chains around their necks which is not ideal as they are a choke chain for training while walking. The area had been spot cleaned. There was a chain and a bowl with no dog.

Two adult female dogs were inside crates inside the garage, Opel and Nelly. The smell of ammonia was still obvious but less than on previous visits. Both dogs were assessed by the veterinarian, normal body condition and their coats and crates relatively clean, the concern is the amount of time being confined in these crates and as we have no way of determining how long they are confined we had no ground to remove either. Both Opel and Nelly were in these crates in the garage yesterday at the time of our visit with one other, Crystal who was not in there today.

Occupation: *TRAINEE AWI*

**Witness Statement**

Some of the dogs at the property were tethered by short leashes to a choke chain. Dogs tethered in this manner and left unsupervised are in considerable risk of harm. The dogs tethered were also without shelter and some dogs were without access to water. Many of the water bowls that were present were knocked over, likely by the dogs. Other options for water vessels could have been easily sought to prevent the vessels being knocked over.

There was robust vocalisation from the many dogs on our arrival. Many showed concern at our approach, showing body language consistent with fear, anxiety and distress.

Two of the dogs Desney and Debbie. Showed evidence of chronic skin disease and both dogs were in whelp at the time of seizure. There was also clear evidence of chronic untreated skin and ear disease, exacerbated by dirty living conditions. This would have caused these dogs' unreasonable pain and discomfort.

Seven dogs showed evidence of chronic untreated ear disease. Desney, Dani, Mafia, Astro, Debbie, Dolly, Paris, this condition would have caused significant and unnecessary pain and distress and a number of dogs had visibly poor conformation.

Ear disease is commonly caused by underlying Atopic Dermatitis which is a known heritable disease in German Shepherds.

This would have been obvious to any lay person, and treatment should have been sought. The dogs ears required medical treatment and pain relief immediately and ongoing. Atopic Dermatitis and related ear disease is a heritable condition and both dogs should not be bred from as it is likely to cause pain and distress particularly in moderate to severely affected dogs.

Eight dogs, show mild to moderate radiographic abnormalities in their hip joints. Hip Dysplasia is a known heritable disease in German Shepherds, and strict screening is advised for all breeding.

The code of welfare for dogs, minimum standard no7. Breeding, states; Breeders must make all reasonable efforts to ensure that the genetic make-up of both sire and dam will not result in an increase in the frequency or severity of known inherited disorders

Thirteen dogs were underweight with low body conditions scores of 2-3/9 on Purina scale

Fourteen dogs had unkempt coats with significant fur matts, faecal and urine staining. Only one dog had a coat that had been recently attended to, Monty. The faecal and urine staining typically leads to a risk of skin conditions and infection which can cause pain and distress.

Eight dogs Elite, Emma, Puppy, Mafia, Dolly, Debbie, Zeta, Casper, show behaviour abnormalities fear, hyperactivity, frustration. One dog Ritza had such a severe injury to her leg due to tethering and trauma that euthanasia was required despite treatment.

KP So before the, the, the interview starts off, I'd like to, yeah, just backtrack to the, to the dogs that we're holding here now.

JW Mm-hmm.

KP You were, you were saying that two of them are in whelp and that was Destiny and, no --

LD Debbie.

KP And Debbie.

JW Debbie, yes.

LD Yep.

KP Okay, and is there anything else we should know about the dogs that we're, we're holding here for any health or behaviour or anything that may assist in us giving the full care that's needed?

JW Are you having problems?

KP No.

LD No, we just need to know if there was any special dietary requirements, were any under any medication?

KP That's what we do with --

RS Tell them the food that you're on.

JW Well they're being fed on, Destiny and Debbie are being fed on Royal Canin 4800. Caspar and Monty, also 4800. Elite, 4800, Paris, 4800, Astro, 4800 --

RS The males?

JW Yes, that was Astro.

RS Were they all on the same food or different?

JW So they're all different foods, depending. Forellie, oh Retsa was on 4800.

KP And any behavioural type things, likes, dislikes or anything that --

JW They're not used to men.

LD None of them?

JW None of them.

RS None. There's only females on the property until I came along and show me.

JW Mmm.

LD Any of them under any medication?

JW Yes, Danny for ear mites, Debbie for ear mites, Mafia have been treated --

KP Just any-, anything you can think of that might be of use for us and to making sure we're doing, any dogs coming in, we like to know as much information as, as possible about them.

RS Was this asked at the time?

JW No.

RS Is this, how many weeks later?

**Witness Statement**

<b>Name:</b> Dr Jess Beer BVSC MANZCVS	<b>Occupation:</b> Vet
This statement (consisting of 2 pages each signed by me) is true to the best of my knowledge and belief. It has been made by me knowing that it may be admitted as evidence for the purposes of the standard committal or at a committal hearing, and that I could be prosecuted for perjury if the statement is known by me to be false and intended by me to mislead..	
<b>Date:</b> 12 December 2017	
<b>Signature:</b> 	<b>Witnessed by:</b> 

I have BVSc from Massey University, graduating in 2002. I have Membership by examination of the Australia and New Zealand College of Veterinary Scientists in Veterinary Behaviour, 2014. I have worked with animal welfare charities in UK, Romania, India, Portugal, Greece, Thailand, Mexico, Panama, Rarotonga and New Zealand. I am currently working as a Head Veterinarian at SPCA Auckland, as well as being the Owner and Director of a private behaviour consulting business, Kiwi Vet Behaviour.

On the 13<sup>th</sup> of October 2017, I was requested by SPCA Animal Welfare Inspectors Laurie Davis and Kevin Plowright to assist them with an inspection of large numbers of German shepherd dogs at 1478 Miranda Road, Mangatangi.

My overall observation on the day was of a poorly run large scale dog breeding operation with an obvious lack of facilities to adequately house their dogs. The large number of German shepherd dogs were contained in various locations around the large rural property. Dogs were confined within the hay barn, utility shed, wool shed, deer shed, garden shed and garage. Dogs were also found tethered at various locations around the property without adequate shelter. The dogs were tethered with choke chains around the dog's neck. The use of such chains and short tethers risk harming the dogs.

There was robust vocalisation from the many dogs on our arrival. Areas where the dogs were contained showed evidence of faecal tracking and build up, and many of the dogs were without water. Many showed concern at our approach, showing body language consistent with fear, anxiety and distress.

**"Astro", a 5 year old Male Entire, German shepherd dog, identity number 292117, Dog 2.**

"Astro" was found within a run behind a shed. The environment was open on 3 sides but sheltered above and kennelling was provided. There was a bowl of water, but no form of enrichment other than large and aged looking raw animal bones which were contaminated with faecal and urine material.

Astro was reactive and excessively vocal within the caged area, he was shaking his head and displaying significant fear aggression. He reacted excessively on exiting the cage, extreme vocalisation and escaping attempts due to the proximity of strange humans with fearful and panicked behaviour evident. In my view the environment lacked the basic necessities for good mental health. The run appeared to have

**Signed:**   
**Witness signature:** 

**Occupation:** AW Inspector

**Witness Statement**

been recently washed, although the strong smell of urine and faeces was present, coming from both the dog and the run he was confined in. There was no run off drain sighted and a build-up of faeces was seen on the grass next to the runs, indicating the faeces and urine was simply hosed off the concrete onto the grass adjacent. This would create a significant bacterial contamination and fly risk in the heat of summer.

Astro's clinical exam showed evidence of a thin body condition score 2/9 and his weight was 31.2kg. I would expect a dog of his gender and age to be closer to 35kg. He had a matted coat, with obvious urine and faecal staining which would cause distress and skin irritation or infection. He had evidence of a moderate ear infection identified as bilateral otitis externa with odorous waxy canals bilateral pruritic scaly pinna which was warm to touch. Medication was necessary to treat this. He had poor conformation to his hind limbs, and discomfort on hip extension. Astro required a muzzle for his clinical exam due to his fear aggression. Radiographs under general anaesthesia showed evidence of an abnormal left hip joint, which would be consistent with mild hip dysplasia. This is a heritable condition and should not be bred from as it causes pain and distress particularly in moderate to severely affected dogs. The Code of Welfare for Dogs 2010, Minimum Standard no7. - Breeding, states; Breeders must make all reasonable efforts to ensure that the genetic make-up of both sire and dam will not result in an increase in the frequency or severity of known inherited disorders.

Astro's health assessment revealed poor overall body condition and a matted coat. He had an untreated ear infection which caused pain and distress. These both being visually obvious to any lay person. His extreme reactive barking and fearful body language on the premises was consistent with a high level of anxiety. This ongoing fearful behaviour, and concern around humans continued for a period of time once in the care of the SPCA and it has taken some time for him to become calmer and happier. The behaviour exhibited by him was consistent with a lack of socialisation, enrichment and trust. His behaviour has improved during his time at the SPCA showing an increased willingness in trainability and more confident interactions with handlers. It was clear that the deficiencies of his environment and socialisation were detrimental to his physical and mental wellbeing. It is likely there is a genetic component to his fearful behaviour as well.
