Defendant

Name:* Barbara Glover

PRN: 61092530

Address: 1478 Miranda Road
Mangatangi
Mangatawhiri 2473Gender:* Female
Date of birth:* 2/08/1938
Driver licence no:
Occupation: Farmer / Dog Breeder

Offence details

I, Kevin Plowright of the Royal Society for the Prevention of Cruelty to Animals (Auckland) have good cause to suspect that Barbara Glover has committed the offence specified below.

Date of offence:* Between 28 July 2017 and 13 October 2017

Offence location:* at Mangatawhiri

Offence description: *

Being the owner of an animal that was ill, namely a German Shepherd dog named Mafia, did not ensure that the animal received treatment to alleviate unnecessary pain or distress suffered by the animal.

Legislative reference:* Animal Welfare Act 1999, sections 11(1), 12(b) and 25.

Maximum penalty:* 12 months' imprisonment and/or \$50,000 fine.

Offence category:* 2 Representative charge:* No Alternative charge:* No

Select Yes if the offence description is worded as a representative or alternative charge.

First appearance hearing

Date: 17th December 2018 Time: 9am

Summary of Facts

49. Dogs taken into SPCA possession:

(1) MONTY

Young male pup tethered on a short 1-meter leash and choke chain to a picket fence. He did not have water or shelter.

(2) ASTRO

Adult male dog in the old kennel run enclosure contaminated with faeces. He was identified by the veterinarian as being underweight, with a matted coat, obvious urine and faecal staining causing distress and skin irritation and infection. A moderate untreated ear infection causing pain and distress.

(3) DOLLY

Adult female dog seized from the same enclosure as Astro. The veterinarian identified a matted coat, obvious urine and faecal staining causing distress and skin irritation and infection. She has severe bilateral otitis, a chronic untreated ear infection causing pain.

(4) MAFIA

Adult male dog seized from the same old enclosure area as Astro and Dolly and also exhibiting faecal and urine stained coat causing distress, irritation and infection. He had otitis externa, to the left ear causing pain and discomfort.

(5) CASPER

Young male pup tethered on a short 1-meter leash and choke chain around his neck without any water or adequate shelter, on the outside of the cattle yards. The pup had matted coat, obvious faecal and urine staining.

Inspector Statement

just wait for Janine. Barbara Glover was then addressed by Todd Kirker from Tuakau Police to further inform her. She became visibly distressed and refused to speak with him also. We therefore started our seizure process.

We brought SPCA Veterinarian Jess Beer to perform a basic assessment on the dogs living conditions and a basic health assessment.

Dog 1 seized, Monty, a young male pup tied to the picket fence by short 1m lead attached to a choke chain. He was in normal body condition but without any shelter. He had water. Yesterday he was tethered by a short lead around by the concrete kennel runs with no water and no shelter.

The concrete kennel runs had been cleaned and the dogs all had water today. SPCA Veterinarian assessed the dogs inside the runs. They were all underweight, their coats were all matted and covered in faecal matter and urine. A couple of the dogs were shaking their heads and displaying signs of distress. Dogs 2. Astro, male adult, 3. Dolly, female adult and 4. Mafia, male adult were seized.

In the large open utility garage the dog tethered on the short lead seen yesterday was gone, the bowl with unpalatable water remained and the urine & faecal staining was still evident on the floor. There were scratch marks on the floor and wall. There was an empty crate right at the rear of the shed unclean, with stained and ripped newspaper. We could hear adult barking coming from somewhere. We sighted a dead bolted door we had never seen before and certainly had not ever been shown. We could hear adult barking coming from there. There were no windows. We didn't want to cause unnecessary damage to the door and carried on with the inspection with the intention of asking Janine to unlock it for us.

At the cattle yards where an adult 'Ritzi' had been tethered yesterday was now a young pup who started fear urination as we approached. Our veterinarian stated he had bony abnormalities. He was tethered by 1m lead to a cattle crush with no water and no adequate shelter on a concrete floor covered with urine and faeces. Dog 5 Casper young male was seized.

Inside the cattle yard were a further two female adult dogs both tied on chains approximately 1m long. One in normal body condition with water and one underweight with a moderately matted coat. Identified as Dog 6 Zeta seized. Both dogs were tethered with choke chains around their necks which is not ideal as they are a choke chain for training while walking. The area had been spot cleaned. There was a chain and a bowl with no dog.

Two adult female dogs were inside crates inside the garage, Opel and Nelly. The smell of ammonia was still obvious but less than on previous visits. Both dogs were assessed by the veterinarian, normal body condition and their coats and crates relatively clean, the concern is the amount of time being confined in these crates and as we have no way of determining how long they are confined we had no ground to remove either. Both Opel and Nelly were in these crates in the garage yesterday at the time of our visit with one other, Crystal who was not in there today.

Inspector Statement

Glover. We would also get Waikato Animal control to assist us with the safe removal of welfare comprised dogs.

INSPECTION 5.

On the 13th of October 2017 at approximately 11:30am Inspector Lori Davis and I entered the property of 1478 Miranda road Mangatangi assisted by, Veterinarian Jess Beer, Community Police Constable Todd..., Waikato Animal Control Officer Rhys Heatley and a number of SPCA staff to assist with the transportation of dogs.

As we drove up the driveway we sighted a pup in the pen area next to the cottage without shelter. We stopped outside the picket fence of the main house. There was another young pup which was tethered without shelter or water. Another adult dog was also tethered without shelter and water. Mrs Glover came out of the house I advised her of why we were at the property and advised her of the Bill of Rights. But I said I would not be asking any questions today but anything she may say could be used as evidence in a court of law. Mrs Glover asked me to wait until Ms Wallace was home as she was only 15min away. We decided to proceed regardless.

I first checked on the dog that was tethered in the utility shed yesterday. This dog was no longer there. The young male pup tethered on a short leash to the picket fence was seized and entered as **"MONTY" dog 1.**

I then looked at the dogs in the old enclosures with the veterinarian, the enclosure had been cleaned out and the dogs had water. The Veterinarian stated the dogs were underweight, matted coats and with ear infections. We seized a male dog **"ASTRO" dog 2.** & a female **"DOLLY" dog 3.** & a male dog **"MAFIA" dog 4.**

Ms Wallace arrived home, I informed her of why we were at the property, I advised her of the Bill of Rights but let her know I will not be asking any questions today. As we would be focusing on the safe removal of welfare compromised dogs from their care.

We walked past the utility shed and heard dogs barking from inside a locked room in the utility shed. We had not been aware of any dogs being kept in this room previously. We requested that Ms Wallace produce a key for the room.

We continued to the cattle yards, one young male pup was tethered on a short leash without any water and inadequate shelter. This dog was seized. **"Casper" dog 5.** Two other adult female dogs were tethered in the cattle yards, one was underweight 2/9 BCS and matted coat. This dog was seized **"Zeta" dog 6.** The other dog we decided to leave.

As we entered into the garage, Ms Wallace asked if we had a warrant for the removal of dogs, I suggested Ms Wallace Google search the Animal Welfare Act 1999 and search section 127 (5) and that will explain the powers that we were operating under. The dogs were confined in the crates without water. We are

Occupation: **TRAINEE AWI**

Witness Statement

Some of the dogs at the property were tethered by short leashes to a choke chain. Dogs tethered in this manner and left unsupervised are in considerable risk of harm. The dogs tethered were also without shelter and some dogs were without access to water. Many of the water bowls that were present were knocked over, likely by the dogs. Other options for water vessels could have been easily sought to prevent the vessels being knocked over.

There was robust vocalisation from the many dogs on our arrival. Many showed concern at our approach, showing body language consistent with fear, anxiety and distress.

Two of the dogs Desney and Debbie. Showed evidence of chronic skin disease and both dogs were in whelp at the time of seizure. There was also clear evidence of chronic untreated skin and ear disease, exacerbated by dirty living conditions. This would have caused these dogs' unreasonable pain and discomfort.

Seven dogs showed evidence of chronic untreated ear disease. Desney, Dani, Mafia, Astro, Debbie, Dolly, Paris, this condition would have caused significant and unnecessary pain and distress and a number of dogs had visibly poor conformation.

Ear disease is commonly caused by underlying Atopic Dermatitis which is a known heritable disease in German Shepherds.

This would have been obvious to any lay person, and treatment should have been sought. The dogs ears required medical treatment and pain relief immediately and ongoing. Atopic Dermatitis and related ear disease is a heritable condition and both dogs should not be bred from as it is likely to cause pain and distress particularly in moderate to severely affected dogs.

Eight dogs, show mild to moderate radiographic abnormalities in their hip joints. Hip Dysplasia is a known heritable disease in German Shepherds, and strict screening is advised for all breeding.

The code of welfare for dogs, minimum standard no7. Breeding, states; Breeders must make all reasonable efforts to ensure that the genetic make-up of both sire and dam will not result in an increase in the frequency or severity of known inherited disorders

Thirteen dogs were underweight with low body conditions scores of 2-3/9 on Purina scale

Fourteen dogs had unkempt coats with significant fur matts, faecal and urine staining. Only one dog had a coat that had been recently attended to, Monty. The faecal and urine staining typically leads to a risk of skin conditions and infection which can cause pain and distress.

Eight dogs Elite, Emma, Puppy, Mafia, Dolly, Debbie, Zeta, Casper, show behaviour abnormalities fear, hyperactivity, frustration. One dog Ritza had such a severe injury to her leg due to tethering and trauma that euthanasia was required despite treatment.

Witness Statement

Name: Dr Jess Beer BVSC MANZCVS	Occupation: Vet
<p>This statement (consisting of 2 pages each signed by me) is true to the best of my knowledge and belief. It has been made by me knowing that it may be admitted as evidence for the purposes of the standard committal or at a committal hearing, and that I could be prosecuted for perjury if the statement is known by me to be false and intended by me to mislead (Summary Proceedings Act 1957 section 162).</p>	
<p>Date: 12 October 2017</p>	
Signature: 	Witnessed by: 

I have BVSc from Massey University, graduating in 2002. I have Membership by examination of the Australia and New Zealand College of Veterinary Scientists in Veterinary Behaviour, 2014. I have worked with animal welfare charities in UK, Romania, India, Portugal, Greece, Thailand, Mexico, Panama, Rarotonga and New Zealand. I am currently working as a Head Veterinarian at SPCA Auckland, as well as being the Owner and Director of a private behaviour consulting business, Kiwi Vet Behaviour.

On the 13th of October 2017, I was requested by SPCA Animal Welfare Inspectors Laurie Davis and Kevin Plowright to assist them with an inspection of large numbers of German shepherd dogs at 1478 Miranda Road Mangatangi.

My overall observation on the day was of a poorly run large scale dog breeding operation with an obvious lack of facilities to adequately house their dogs. The large number of German shepherd dogs were contained in various locations around the large rural property. Dogs were confined within the hay barn, utility shed, wool shed, deer shed, garden shed and garage. Dogs were also found tethered at various locations around the property without adequate shelter. The dogs were tethered by choke chains around the dog's neck. The owners of these dogs are risking possible harm to tether their dogs in this manner.

There was robust vocalisation from the many dogs on our arrival. Areas where the dogs were contained had evidence of faecal tracking and build up, and many of the dogs were without water. Many showed concerned at our approach, showing body language consistent with fear, anxiety and distress.

"Mafia" Dog 4. Adult entire male German Shepherd Dog. Identification number 292118.

"Mafia" was found confined in a small dog run enclosure, this enclosure was one of a block of three. The environment was open on 3 sides but sheltered above and kennelling was provided. There was a bowl of water, but no form of enrichment other than large and aged looking raw animal bones. The enclosure appeared to have been recently washed, although the strong smell of urine and faeces was present, coming from both the dog and the run he was confined in. There was no run off drain sighted and the

Signed: 

Witness signature: 

Occupation: AW Inspector

Witness Statement

build-up of faeces was seen on the grass next to the enclosures, indicating the faeces and urine was simply hosed off the concrete onto the grass adjacent. This would create a significant bacterial contamination and fly risk in the heat of summer.

'Mafia' was reactive and excessively vocal within the caged area, displaying territorial aggression, but then simply exuberance on release from the cage. It would be considered that the environment lacked the basic necessities for good mental health.

Mafia's clinical exam showed a body condition score of 3.5/9 and his weight was 33.7kg. He had a matted coat with obvious urine and faecal staining which would cause distress and skin irritation or infection. He had otitis externa to his left ear causing pain and discomfort. His left testicle was slightly smaller and softer than the right. Despite no pain on assessment of his hind limbs radiographs under general anaesthesia showed evidence of shallow hip joints, which would be consistent with mild hip dysplasia.

Mafia's health assessment revealed overall poor body condition and a matted coat. He had an untreated ear infection which caused pain and distress. The discrepancies in testicle size is inconsistent with breed requirements. His reactive barking and body language on the premises was consistent with a level of anxiety towards strangers. This ongoing reactivity, barking and nipping handlers, continued for a period of time once in the SPCA and it has taken some weeks for him to become calmer with humans. The behaviour exhibited by him was consistent with a lack of socialisation, enrichment and trust. His behaviour has improved during his time at the SPCA showing an increased in trainability and less inappropriate behaviour such as leaping up and nipping. It was clear that the deficiencies of his environment and socialisation ongoing were detrimental to his behaviour around humans.

Witness Statement**Dazzle #290862**

Dogs NZ pedigree information for DAZZLE VOM VOLKERSON shows a common ancestor with Mafia, Desni and Debi. Dazzles dams, dams, dam is VA SCHIWA VOM OSTERBERGER-LAND.

Dazzles SPCA clinical records detail seizure from Glovers property at 8 months old. On examination 3 days post seizure, Dazzle showed a cowhocked gait with restricted hock extension and bilateral hindlimb scuffing. She had reduced proprioception in the left hind leg with a presumptive diagnosis of genetics plus nutrition and inappropriate exercise. Radiographs were taken to show bilateral hip dysplasia with shallow acetabulum, thickened femoral neck and osteophytes on the left side. Dazzle was euthanased based on these findings.

Mafia #292118

Mafia is a 4-year-old dog seized from the Glover property on the 13th October 2017. Dogs NZ Pedigree shows MAFIA VOM VOLKERSON'S dam as VA SCHIWA VOM OSTERBERGER-LAND, sire as SCHUMANN VON TRONJE. MAFIA VOM VOLKERSON, DEBI VOM VOLKERSON AND DESNI VOM VOLKERSON share the same dam.

Mafias SPCA clinical records detail a history of severe, chronic ear disease which has required multiple sedations for examination and treatment. Mafia has had such significant behavioural problems he has required anti-anxiety medications. Mafia showed reactivity to lumbosacral palpation after change in greeting behaviour on 25 March 2018.

Radiographs performed at the SPCA on the 8th November 2017 demonstrated shallow socket on the right side and thickened femoral head on the left side consistent with mild hip dysplasia. Radiographs performed on the 14th May 2017 showed some disc calcification around the thoracolumbar junction. Mafia has been placed on the long-term non-steroid anti-inflammatory medication Trocoxil.

Dogs New Zealand Registration records show that MAFIA VOM VOLKERSON has sired one litter, resulting in registration of 2 puppies whelped 18/06/2015.

Mafia had PennHIP radiology performed on the 27th May 2018, PennHIP can be used reliably as early as 4 months of age to diagnose hip laxity. Mafia had a distraction index (DI) of 0.4 which is below the breed average of 0.42 with no radiographic evidence of OA for either hip. This DI puts him at a mild risk of developing radiographic evidence of osteoarthritis early in life, however OA may manifest after 6 years of age or later (PennHIP report).

Mafia displays similar, yet undiagnosed, gait abnormalities and pain as his sisters, nieces, and nephews (Debi and Desni and their progeny). In the absence of hip osteoarthritis or laxity the cause of these gait abnormalities is unknown.

NOTES ON "MAFIA"

RESPONSE TO WITNESS STATEMENT FROM JESS BEER SIGNED 12.12.2017
WITNESSED BY A.R. Inspector

Page 1 Par.6

1. *"MAFIA" was found confined in a small dog run enclosure" JB The environment was open on 3 sides but sheltered and kennelling provided.*

INCORRECT There were no sides open, each side of his 3.5 meter long kennel and run was classed with solid plywood, which the SPCA photos clearly display.

1a) *"There was no run off drain sighted and the build-up of faeces was seen on the grass next to the enclosures, indicating the faeces and urine was simply hosed off onto the grass adjacent.*

This would create a significant bacterial contamination and fly risk in the heat of summer. JB"

INCORRECT and bluntly misleading. First of all the faeces are picked up and removed before water blasting out. There is a concrete block wall in front of the original kennels so this situation does not happen.

SPCA own photos clearly show this is an inaccurate statement. It has always been like since first constructed many decades ago. This concrete flooring and wall is still standing. **JB's COMMENTS ARE INTENTIONALLY MISLEADING**

The remaining area to the side had been earthmoved, in preparation for the new kennel block. There is a grass area is where all of the dogs run free and where our sheep graze being natural lawn mowers.

2. Page 2 Par.2

Inaccurate

* *"MAFIA" was reactive and excessively vocal within the caged area, displaying territorial aggression, but then simply exuberance on release from the cage. JB"*

"MAFIA" was doing what every good German Shepherd does naturally this is HIS kennel area, he is a GUARD DOG and these people are all strangers, his instinct told him up to no good, we were not with him they marched in to his space.

* Mafia was not caged! Mafia was in his 3.5 m long kennel.

Mafia loves coming out and playing and travelling to exciting places of course he was happy always has been and I hope always will be. As Mafia had an exceptional happy character.

* "MAFIA" is a CHAMPION and has been exhibited throughout New Zealand, he has also won multiple Major Awards e.g. **BEST BABY - PUPPY and JUNIOR OF GROUP WORKING DOGS IN THE ALL BREED SHOW RINGS.**

Mafia is known for his amazing calm loving character. To be awarded the Title CHAMPION "Mafia" WON at least 8x under 8 different International and National Judges Best Dog.

JB's statements are incorrect. Her own Clinical Health Check 2 weeks after uplifting Mafia and throwing him into the local POUND states Temperament: handable, good.

3. Page 2 Par. 3

Inaccurate

Mafia's clinical exam showed a body condition of 33.7 kg. This is correct weight for his age and height according to the German Shepherd Breed Standard - Male Weight: 30 - 40 kg

Mafia had just had a Vet health Check at Takanini Vets on the 19th September 2017 3 weeks prior to being uplifted. Mafia did not have a matted coat when uplifted photos show this clearly.

Mafia had been in the local Pound for 2 weeks BEFORE he received a SPCA Vet Health Check.

"Despite no pain on assessment of his hind limbs radiographs under general anaesthesia showed evidence of shallow hip joints, which would be consistent with mild hip dysplasia.JB"

Inaccurate and incorrect.

Mafia was x-rayed on the 19th September 2017 by Takanini Veterinary Associates. Mafia's x-rays were sent to Australia to be evaluated and scored by Dr. Mariano MAKARA DIPL EC VDI, MANZCVS Australia's TOP professional Radiograph Specialist

receiving a total score of 3:3 Hips from a possible 106 = Grading NORMAL and 0:0 Elbows NORMAL. **Not as JB stated "Moderate Hip Dysplasia" BVA Hip Score for Moderate Hip Dysplasia is in 1 hip a score of 19-30.**

JB is not qualified and is not officially recognised to score Hips - - the huge inaccuracies clearly demonstrates this is not her field of expertise.

Additionally a German Shepherd is supposed to be put under general anaesthesia once only to be x-rayed for hips and elbows **"dog must be at least one year of age in order to ensure skeletal maturity" Regulations from BVA = British Veterinary Association.**

Each time a dog is put under a general anaesthesia it is a risk to his/her life. MAFIA was put under General Anaesthesia 2x.

4. Page 2 Par.4

Inaccurate

"MAFIA" has NEVER shown any signs of aggression in his life. The way this dog has been treated from the moment he was uplifted and thrown into the Pound, and the rough treatment within the SPCA naturally he would be wondering what has happened to him, when are we coming to pick him up!?!"

SPCA Clinic Records - Mafia

13.10.2017 Mafia was placed in **Pukekohe Pound** for 2 weeks - WHY WAS MAFIA NOT EXAMINED FOR 2 WEEKS?

27.10.2018 JB undertook Vet Health check Weight: 33.9 kg - **Left Ear infection** - Musculoskeletal - less pronounced conformation issues, no pain in extension - Temperament: handable, good - Treatment: bathe, groom, vaccinate, flea, worm.

To go on Canuaral right ear for 7 days and recheck.

Mafia had NO INFECTION in his Right Ear according to JB. Did he have an infection at all???

30.10.2017 Kevein Plowright gives authorisation for Mafia to go under General

Anaesthesia for the purpose of a hip dysplasia test and ear exam.

03.11.2017 **RE-CHECK: NO INFLAMMATION, NO DISCHARGE ON EXAM.**

08.11.2017 **General Anaesthesia - x-rayed.** Examine both ear canals - no inflammation no infection, but waxy debris. Clean out with epizootic.

14.11.2017 Right hand side ear black wax pruritus. Left ear fine. To treat right ear with Canuaral 2x daily for 7 days. **NB: Mafia did NOT have an ear infection in his RIGHT ear up until now...** Weight: 34.6 kg = 1 month 900 g weight gain.

17.11.2017 Rechecked ears, Ears improving, to continue with treatment.

Comfortable with hip extension.

20.11.2017 Otoscope - more comfortable with exam. Right ear clearing canal no redness and debris resolved

05.12.2017 Left ear - canal clean and no hyperaemia. Right ear - full of debris and painful. Will need a GA and clean. Foster cancelled

07.12.2017 **General anaesthetic - Right Ear flushed with epiotic, look inside after flushed, no need for further treatment - Doug Dreyer**

08.12.2017 Monthly recheck. Checked ears. to go on Clavulox 500 (Antibiotics) 1 tablet 2x daily for 7 days and Tramadol 50 mg 1+1/2 tablets 2x daily for 3 days. Recheck in five days. Only right ear, left ear looks fine.

09.12.2017 Still stressed in kennels add Diazepam (Valium) 5mg 2 tablets 2x daily

11.12.2017 Checked ears. Cleaned ears. Otoscope mild inflammation along canal but nothing deeper and tympanic ok.

Start **Fluoxetine 20 mg (= Prozac - Antidepressant to treat major depressive disorder)** 2 tablets ONCE daily PLUS continue Diazepam 10mg TWICE daily add in Metacam 2.5mg ONCE daily for 3 days

Tramadol with Fluoxetine contra-indicated

13.12.2017 Left ear looks ok. Right ear crusting around outside of ears.

Continue with Clavulox 500 kgs 1 tablet TWICE daily for a further 9 days

15.12.2017 Diazepam has not been effective. To change to Clonazepam 2mg . Give 1-2 tablets twice daily for 5 days and reassess.

Clonazepam 2mg is a strong sedative. Strong is 1 - 2 mg.

Mafia was given 3-4 mg daily for 5 days!

18.12.2017 **Increase Clonazepam to 4 tablets = 4 mg daily**

21.12.2017 Unable to exam dog as dog very stressed by otoscope

Give Domitor 0.3 torb 0.3 ml IM (Injectable Drug for Sedation)

PLUS Baytril 150 mg (Antibiotics) 8 days, Metacam 2 ml SC

Continue Fluoxetine 20 mg 2.5 tablets once daily

27.12.2017 **Fostered Out (230 824)**

Dispensed with Easotic Topical for 10 days, Oral Baytril and

Metacam

27.12.2017 Start Cipflox ear Drops (donated stock) 1/2 ml BID for 10 days

Can STOP Enroflox, STOP Easotic drops. Recheck ear at end of week, may need sedation again. Consider another ear flush?

NO WHERE DOES IT STATE WHEN 'ENROFLOX' WAS FIRST ADMINISTERED!!! HOW MANY OTHER DRUGS ARE NOT MENTIONED???

04.01.2018 **Mafia's behaviour has settled in foster**

05.01.2018 Left ear looks good (he still resents otoscope) Right ear red and painful will not allow scope, no obvious purulence and certainly less inflamed.

Continue 1 more week Cipflox drops (Antibiotics)

Given GABAPENTIN 300mg x 3 (Extremely strong treatment

used primarily to treat seizures and neuropathic pain - used mainly for people in Hospice)

May still require sedation for proper examination

12.01.2018 Ears looking better, right ear to continue with antibiotics (Ciplox) for a further 7 days

19.01.2018 Still comfortable in foster with medication
One more week cipflox ear drops (has 10mg/ml hydrocortisone) Add Prednisone 20 mg for 7 days

09.02.2018 Left ear looks normal, right ear canal looks less inflamed. Resented ear examination. To flush both ears with epizootic twice weekly

13.03.2018 left ear canal is good. Right ear full of wax and slight inflammation. Continue twice weekly ear cleans with epiotic. Weight: 35.5 kg

Weight Increase in 5 months SPCA Oct-March = 1.9 kg

Following Drugs Given to MAFIA - noted officially on SPCA Clinic Records

Ear Drops: Epiotic; Cipflox; Enroflox 2.27%

Temgesic -

Clavulox 500 mg - 1 Tab 2x daily - antibiotic

Tramadol 50 mg - 1+1/2 Tab 2x daily (synthetic opioid analgesic)

Diazepam 5 mg - 2 Tabs 2x daily - benzodiazepine (is sometimes called benzos a class of physic active drugs - used for anaesthesia - sleep inducing muscle relaxant)

Fluoxetine 20 mg - 2x Tabs 2x daily (Prozac - antidepressant) + Diazepam 10 mg 2x daily (is sometimes called benzos a class of physic active drugs - used for anaesthesia - sleep inducing muscle relaxant)

Metacam 2.5 mg - 1 daily - non steroid antiinflammatory

Clonazepam 2 mg - 2 Tabs 2x daily - benzodiazepine (is sometimes called benzos a class of physic active drugs - used for anaesthesia - sleep inducing muscle relaxant)

Domitor 0.03 ml - strong sedative

Baytril 150 g - antibiotic

INACCURACIES AND UNTRUTHS IN WITNESS STATEMENT: 10x

about that.

Lets just work on that GR

Oh cool LD

I will give you that. JW

Laurie has a disk of the recording of the interview that you have asked for. GR

Oh great JW

We will work on all that, I do have 2 letters from Vets here also proving that they have been treated. They have been health checked. Mafia had a big health check approximately 2 weeks before you uplifted him. So can we have these.

Can we have these? Thank you excellent GR

Yes they are for you. We have got all the details of each dog, when anything was administered and the dates etc These are the quotes we received and they are probably going up too high for the other one. I did not realise you could purchase this from Mitre 10. JW

I was in there the other day buying some stuff, I am doing a little waterproofing for a little refurb at home in a bathroom kind of thing umm I was kind of cruising for waterproofing membrane stuff and there is all manner of kind concrete products seal products admittedly a lot of them are probably low end domestic kind of stuff and you will probably be wanting more a commercial heavy duty kind of grade. That said just have a look... I mean it is worth... prior to now that you have done that you have made such a fantastic investment and what is a great look and congratulations to you! That is a great little facility there, it is fabulous loving the idea the way you have got it set up ahh you know just the things I was asking How does the drainage go? GR

We have got good drainage, we have put a lot of thought into JW

Yes you have put some thought into it which is fabulous. So that is good just that next level, you know that gives you kind of, that gold level status of again that assurance of, would it not be fantastic eventually, not that you potentially would, but if someone who wanted one of your dogs and actually asked they want to come and have a look at your facility. You go "No Problem" look how fantastic this is and they go WOW this is amazing you know. Bottom line is you are actually establishing a level of care that is not able to be questioned. GR

So if we got like a Ring Binder and had sleeves in it with all the dogs names and just documented everything so that it is all together rather than individual books PW

Yeah perfect. Absolutely GR

Then you just bring out the Ring Binder out and say ok, here is all our dogs, this is what is happening. PW

Yep the reality is that provides that story of the journey of the dog from the period it was born and potentially you sell a dog one that wants one and you give you are able to select from that information that you know GR

they get information and photos from when they are born and throughout JW

But yeah but again think systems approach yeah. GR

I am not trying to put a dampner on this 'feel good' talk that we are having right now, but the potential for us to go through court is still very real, you know please do not think for a minute, that we are all happy, we walk away you know we might give you some dogs. LD

Are you wanting to press charges?JW

Not wanting, that is not what I said, I said the potential LD

So when I was saying that the investigation has not concluded, so once that is concluded then a decision is made and if you think about it from a time line, we are

KP So before the, the, the interview starts off, I'd like to, yeah, just backtrack to the, to the dogs that we're holding here now.

JW Mm-hmm.

KP You were, you were saying that two of them are in whelp and that was Destiny and, no --

LD Debbie.

KP And Debbie.

JW Debbie, yes.

LD Yep.

KP Okay, and is there anything else we should know about the dogs that we're, we're holding here for any health or behaviour or anything that may assist in us giving the full care that's needed?

JW Are you having problems?

KP No.

LD No, we just need to know if there was any special dietary requirements, were any under any medication?

KP That's what we do with --

RS Tell them the food that you're on.

JW Well they're being fed on, Destiny and Debbie are being fed on Royal Canin 4800. Caspar and Monty, also 4800. Elite, 4800, Paris, 4800, Astro, 4800 --

RS The males?

JW Yes, that was Astro.

RS Were they all on the same food or different?

JW So they're all different foods, depending. Forellie, oh Retsa was on 4800.

KP And any behavioural type things, likes, dislikes or anything that --

JW They're not used to men.

LD None of them?

JW None of them.

RS None. There's only females on the property until I came along and show me.

JW Mmm.

LD Any of them under any medication?

JW Yes, Danny for ear mites, Debbie for ear mites, Mafia have been treated --

KP Just any-, anything you can think of that might be of use for us and to making sure we're doing, any dogs coming in, we like to know as much information as, as possible about them.

RS Was this asked at the time?

JW No.

RS Is this, how many weeks later?

JW Four.

LD This is the purpose of the interview.

RS I'm just going, how come it's four weeks later?

LD Because we have vet checked every dog and –

RS Oh okay, right, ta.

KP And, yeah, if we can just say, we're going to start kicking off the, the interview very shortly with the –

LD There was only three? Only three dogs that were receiving medical treatment?

JW So there was Dolly, Seta had been treated for it and given Advocate.

LD Who was that, sorry?

JW Seta.

LD Seta.

JW So you've got down Danny as well?

LD Danny, Debbie, Mafia, Dolly, Seta.

JW Seta, Mafia had been treated with the ear-, ah, with the dermatac. Forellie had been treated with it as well. So the ones that have been treated with dermatec were Dolly, Debbie, Destiny, Danny, Forellie, Retsa and Mafia and Seta.

LD So the ones that were being treated at the time that we seized them from the property, Danny –

JW That's right.

LD Debbie.

JW That's right.

LD Destiny.

JW Yes.

LD Dolly.

JW Yes. Mafia.

LD Mafia was being treated at the time? Yep.

JW Mm-hmm.

LD He hadn't finished –

JW No.

LD No. Yeah, Mafia.

JW Seta.

LD Seta.

JW Forellie.

LD Forellie.

JW And Retsa.
