

both canals. Both tympanic membranes are intact. The pinnae are both thickened, hyper-pigmented and the skin is crusting/scaly. This is suggestive of a chronic disease process.

Eyes – WNL

Mucous membranes: pink CRT: <2s

Nose – normal, no lesions or discharge present.

Mouth – very mild generalised build up of tartar.

Chest – no heart murmur or arrhythmia, lung sounds clear.

Abdomen – small, non-reducible umbilical hernia present. Abdomen otherwise comfortable on palpation and no abnormalities detected.

Urogenital system – no abnormalities detected

Skin/coat/nails: Coat dull in appearance, has a subjectively 'yeasty' smell and oily texture. Nails not overgrown.

• UV lamped: Negative

• Ringworm culture required: No

Urine scalding: No

Urine staining: No

Faecal staining: No

Lymph nodes – WNL

Neurological – no obvious neurological abnormalities.

Musculoskeletal – Ambulatory in all 4 limbs. Minimal muscle wastage. Although no obvious evidence of lameness, there is crepitus and pain on flexion and extension of the right elbow.

Behaviour – Slightly quiet but sweet in nature.

Assessment/Differential diagnoses:

1. Emaciation/muscle wastage ddx: chronic and severe malnutrition, parasitism, chronic disease (neoplastic, protein losing enteropathy/nephropathy)
2. Bilateral chronic Otitis externa ddx: likely mixed yeast and bacterial infection.
3. Poor coat condition ddx: environmental, malnutrition, chronic disease, other
4. Pain and crepitus right elbow ddx: arthritis, elbow dysplasia, other

Statement regarding animals' pain and distress upon arrival at SPCA:

Pain level: Chronic & Severe

Grade based on Colorado pain scale: 2/4

Source of distress/suffering: Emaciation/chronic hunger, bilateral chronic ear infections and right elbow pain.

Controlled by treatment: Yes - feeding for weight gain and treatment for ear infections. As emaciated will need gradual increase in caloric intake.

Behavioural distress and symptoms: Quiet in demeanor.

Diagnostic tests performed:

-Blood work (CBC and biochemistry) sent to Gribbles lab.

-Fecal sample sent to Gribbles lab.

-Otosopic ear examination.

-Will need general anaesthetic for elbow and hip radiographs when is closer to a more normal body condition score, in order to minimise the anaesthetic risk.

Treatment (Medications/procedures/surgery):

-Dog was vaccinated with Vanguard +5 and Vanguard Oral Bordetella.

-Drontal and Simparica administered following sampling of faeces.

-EpiOtic: Apply to both ears, gently massage, then clean away debris with swab. Repeat until clean. Apply once daily, before ear medication, for 7 days.

-EasOtic: 1 pump into each ear canal, once daily for 7 days. To be re-assessed at end of treatment time.

-If ear infection is not resolving, recommend cytology and culture to be performed.

-Re-check elbow pain on Monday, once blood results have returned may need to start on pain relief (consider NSAIDs or opioids).

-Feeding plan: Gradual increase to RER (70+(BWx30)) over 7 days. Her total daily amount should be spread over 4 feeds. After the first week, daily calories can be slowly increased by 10-15% to allow repletion of lean body mass. At 24.4kg, Alex's RER is 802kcal/day, which is 2.1 cups of Purina SmartBlend Chicken and Rice per day.

Vanguard CC B Oral

01 Feb 2019 Lorna Maskell-STAFF Note - Inspector Alert

01 Feb 2019 Lorna Maskell-STAFF Event - Status Change

Inspector: Lori Davis
Veterinarian: Aoife Cannon
VN/ID: 302005
Species: Canine
Breed: Shepherd, German
Colour: Black/Tan
Sex: Female
De-sexed: No
Microchip: Yes--Chip # 934000090107213

Physical examination:

Weight: 24.4kg
BCS: 2/9, ribs and lumbar vertebrae easily visible, minimal body fat, generalised muscle wastage
Overall appearance and attitude- Alert and responsive
Hydration - WNL
Ears -- Marked dark brown/black aural discharge - Ear canal inflamed and blackened, thickened skin with scaling - Severe chronic otitis externa
Eyes -- WNL
Mucous membranes: Pink and moist CRT: <2
Nose -- WNL
Mouth -- Minor chipping of teeth with mild tartar
Chest -- WNL
Abdomen -- Umbilical hernia not reducible on palpation
Urogenital system -- WNL
Skin -- Generalised yeasty appearance to skin.

• UV lamped: Negative
• Ringworm culture required: No
Coat and nails: WNL
Urine scalding: Yes
Urine staining: Yes
Faecal staining: Yes
Lymph nodes -- WNL
Neurological -- Mentation appropriate. No neurological abnormalities noted.
Musculoskeletal -- Crepitus palpation of right elbow - advise x-ray
Behaviour -- WNL

Assessment/differential diagnoses:

- Emaciation: malnutrition/inadequate quantity/quality of feeding, parasites, underlying disease process
- Ears: Chronic severe otitis externa
- Right elbow pain: osteoarthritis, elbow dysplasia, other musculoskeletal
Statement regarding animals' pain and distress upon arrival at SPCA: Quiet but good temperament
Pain level: Severe chronic discomfort
Grade based on Colorado pain scale: 2/4
Source of pain: Muscle wastage, ears, right elbow
Controlled by medication: To be assessed post treatment

Diagnostic tests performed: Bloods, faecal exam

Temperature required: No

Treatment (Medications/procedures/surgery): Ear cleaning and topical treatment, xray of elbow, parasite treatment

Blood sample required: Yes

Faecal sample required: Yes

Weight management: Weight gain

Recommended feeding amount and type: To be assessed post bloods

VETERINARY COMMENT:

No clinically significant abnormalities evident on the chemistry results
- we have seen animals with serous atrophy of fat with cachexia that still have
proteins within reference interval.

Alex 1/1

17 Sep 2019	Senka Piri-STAFF	Treatment - Dog - Vet Check	<p>Itching had initially resolved after previous vet visit but has now started again. Scratching at belly and ears. No head shaking. No obvious external rashes. FP was using an ear product on Alex that was used on his previous dog.</p> <p>PE: No obvious rashes/reddening. Both ears have mild to moderate amount of debris present but no inflammation of canals.</p> <p>Plan: Epi-Otic to clean both ears once weekly. To discuss using product such as cytopoint to address allergic nature of skin/ear issues.</p>
